

HARSHIT YADAV

Backend Engineer | Node.js, TypeScript, PostgreSQL | Microservices & Distributed Systems

+91-9068124480 | harshitcodex@gmail.com | harshitcodex.dev | linkedin.com/in/harshitcodex | github.com/harshit-codex

PROFESSIONAL SUMMARY

Backend Engineer with 3+ years shipping production SaaS platforms across LegalTech, EdTech, and Healthcare, including REST APIs, microservices, payment systems, and AI-integrated features. Proven ability to own systems end to end, drive architecture decisions adopted by cross-functional teams, and mentor teammates through code review, collaborating with US-based remote teams from architecture through production support.

EXPERIENCE

Backend Engineer | Internet Division, Sheridan, WY, USA (Remote)

March 2026 – Present

- Architected backend services using Node.js, NestJS, and PostgreSQL for 2 production SaaS platforms: an LMS marketplace and a legal-tech case management system, with Swagger-documented APIs.
- Led adoption of the Stripe Connect marketplace payment architecture across a 4-5 engineer team, including webhook-driven order processing, payouts, and affiliate commission tracking.
- Established multi-tenant security using Supabase JWT and PostgreSQL Row-Level Security, integrating Authorize.net payment processing along with 3 external services (Claude, Firma.dev, and Dropbox) to streamline workflows.
- Provided technical direction to teammates by reviewing 5-10 pull requests weekly and setting backend coding standards, while delivering production support across both platforms within a remote, US-based team.

MERN Stack Developer | Empiric Infotech LLP, Surat, India

February 2025 – February 2026

- Took full ownership of the notification and background job microservices within a team-architected, event-driven system, processing 20,000+ notifications per day for a mobile health-tech platform.
- Developed an AI-powered risk analysis MVP within 1 month for a healthcare documentation platform, flagging risk factors from patient data using Node.js, PostgreSQL, and Redis caching.
- Migrated a decade-old React Native app spanning 15-25 screens, most of it built on deprecated dependencies, to modern Expo architecture.

Full Stack Developer | AppMixo LLP, Surat, India

July 2023 – February 2025

- Created a real-time messaging system for desk support across 200+ franchise locations, using Node.js, MongoDB, Twilio, and WebSockets.
- Delivered integrations with 2 e-commerce platforms (Shopify GraphQL API and eBay), with real-time product synchronization.
- Performance-optimized backend APIs and reporting dashboards by fixing an N+1 query problem and adding targeted database indexes, cutting query load for enterprise clients.

PROJECTS

MyAyur | Health & Wellness Mobile App | Backend Engineer

- Helped design the microservices architecture as part of a 3-engineer team: an event-driven system on AWS ECS Fargate, with services communicating through an SNS to SQS fan-out layer instead of direct calls.
- Applied intelligent batching and rate-limiting logic to the Notification microservice across 3 channels (WhatsApp, email, push), preventing alert flooding before dispatch.
- Orchestrated region-aware job scheduling via EventBridge to power a TDEE-based meal-planning algorithm, generating 2 types of personalized recommendations.
- Implemented a Redis/Valkey caching layer for frequently-called endpoints (diet plan, profile, and others), cutting down redundant database calls.

GigRocket | Learning Management & Course Marketplace Platform | Sole Backend Engineer

- Owned GigRocket's backend end to end: created the data model (27-table PostgreSQL schema) and built 200+ REST APIs powering the platform.
- Built the marketplace payout logic splitting commissions between instructors and the platform, applying rolling reserves to manage chargeback exposure.
- Engineered an anomaly-detection layer for fraud signals and shipped an 11-API guest checkout flow, removing forced signup from the purchase path.
- Built a GitHub Actions CI/CD pipeline to eliminate manual deployment work across 3 environments (development, staging, production), including automated database migrations.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL

Backend: Node.js, NestJS, Express.js, REST APIs, GraphQL, Microservices, Event-Driven Architecture, WebSockets, Agile/Scrum

Databases & ORM: PostgreSQL, MongoDB, MySQL, Redis, Supabase, Drizzle ORM, Prisma

AI & Payment APIs: Claude API, OpenAI API, LLM Integration, Prompt Engineering, Stripe (Connect, Checkout, Billing, Webhooks)

Cloud & DevOps: AWS (EC2, ECS, S3, CloudFront, SNS/SQS, EventBridge), Docker, GitHub Actions, CI/CD, Linux, Nginx

Frontend: React.js, Next.js 14, React Native, Expo, Redux, Tailwind CSS

Tools: Firma.dev, Dropbox API, Git, GitHub, Postman, Swagger

EDUCATION

Bachelor of Technology in Computer Science Engineering

AKTU, Lucknow | CGPA: 7.81 | 2019 – 2023
